48. Rotate Image

Solved

Medium | Topics | Companies

You are given an n x n 2D matrix representing an image, rotate the image by 90 degrees (clockwise).

You have to rotate the image in-place, which means you have to modify the input 2D matrix directly. DO NOT allocate another 2D matrix and do the rotation.

Example 1:

1	2	3
4	5	6
7	8	9

7	4	1
8	5	2
9	6	3

Example 2:

5	1	9	11
2	4	8	10
13	3	6	7
15	14	12	16

15	13	2	5
14	3	4	1
12	6	8	9
16	7	10	11
