Suppose an array of length n sorted in ascending order is rotated between 1 and n times. For example, the array `nums = [0,1,4,4,5,6,7]` might become:

`[4,5,6,7,0,1,4]` if it was rotated 4 times.

`[0,1,4,4,5,6,7]` if it was rotated 7 times.

Notice that rotating an array `[a[0], a[1], a[2], ..., a[n-1]]` 1 time results in the array `[a[n-1], a[0], a[1], a[2], ..., a[n-2]]`.

Given the sorted rotated array `nums` that may contain duplicates, return the minimum element of this array.

You must decrease the overall operation steps as much as possible.
